

# Making Aceh safer through Disaster Risk Reduction

Within the Disaster Risk Reduction Aceh (DRR-A) programme Component 3 will develop the institutional, technical and human resources capacity of the Tsunami and Disaster Mitigation Research Centre (TDMRC) of Syiah Kuala University. TDMRC will be assisted to provide crucial information on the occurrence and (potential impact of) disasters, mitigation advice and services to the provincial, and local governments and partners in the DRR-A programme.

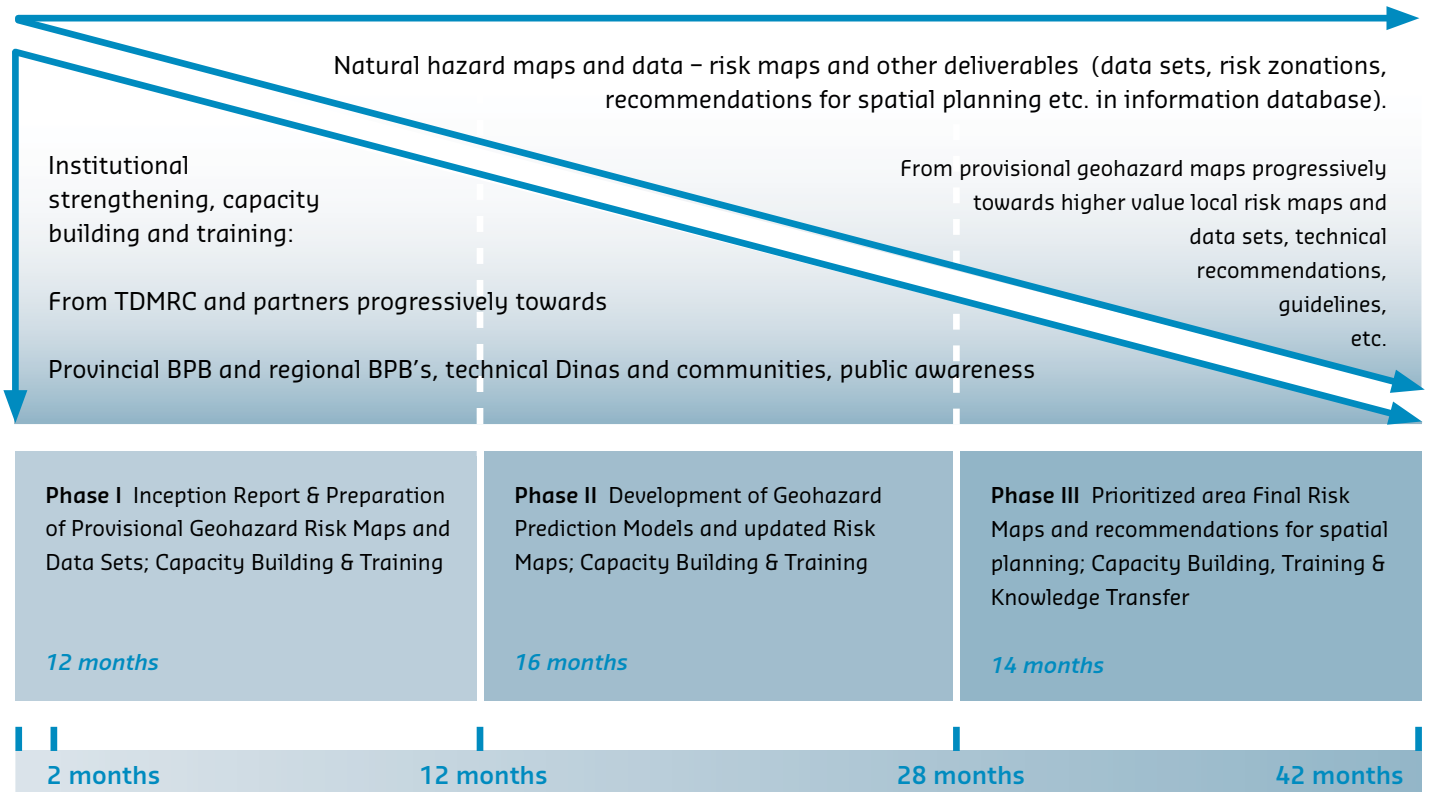

- > Integrated approach to hazard studies, risk assessment and planning
- > Achieving disaster reduction and geohazard preparedness
- > Long-term sustainable socio-economic development

TDMRC will be supported by institutional partners including the Geological Survey of The Netherlands – TNO and Deltares, in close collaboration with the provincial government of Aceh, BRR and other international, national and local contributors and beneficiaries.

Project results will support the integration of long-term disaster mitigation in the development process and contribute to improved spatial planning of the (re) construction of Aceh, thereby minimizing the effects of future disasters and maximizing sustainable socio-economic growth.

# Strengthening the Tsunami Disaster Mitigation Research Centre (TDMRC) Syiah Kuala University - Aceh

## Planned project activities

- 1 Institutional strengthening of TDMRC: develop and implement a 5-year institutional development plan
- 2 Build capacity to provide information services: develop and apply a multi hazard disaster risk management information system (DRMIS)
- 3 Build capacity to provide technical assistance services to community based organisations and local government and to act as a regional Centre of Excellence for disaster mitigation
  - prepare maps indicating potential risks from natural hazards for specific locations
  - design and apply throughout Aceh methods for disaster risk assessments
- 4 Build capacity to provide training and capacity building services
- 5 Build capacity to support academic programmes

*Deltares is a  
new Dutch  
institute for  
Delta Technology*

Deltares has a unique combination of knowledge and experience in the field of water, soil and the subsurface. It is frontrunner in the development, distribution and application of knowledge for meeting the challenges in the physical planning, design and management of vulnerable deltas, coastal areas and river basins.
